SUMMARY

Computer Science student with a strong foundation in Data Structures and Algorithms, specializing in backend development and machine learning. Proficient in Python and C++, with hands-on experience building secure, scalable applications using Flask and blockchain-based technologies. Passionate about engineering intelligent, real-world systems, from clean RESTful backends to applied ML and AI models.

EDUCATION

Aug 2024 – May 2028

Narula Institute of Technology, Agarpara | West Bengal
Bachelor of Technology in Computer Science and Engineering

TECHNICAL SKILLS

Languages: Python, C, C++

Data Analysis: Pandas, NumPy, Matplotlib, Seaborn

Machine Learning: Scikit-learn, XGBoost, TensorFlow, PyTorch

NLP & GenAI: Hugging Face, NLTK, LangChain, ChromaDB

Backend: Flask, FastAPI, REST APIs

Databases: MySQL, Redis

Tools: Git, GitHub, Docker, Jupyter Notebook, VS Code

Core Competencies: EDA, Data Preprocessing, Feature Engineering, Model Evaluation, Deep Learning, NLP, DSA, OOP

KEY PROJECTS

Phonix.AI – Smartphone Price Prediction

Aug 2026

- Built an end-to-end machine learning system to predict smartphone prices from specifications, performing data cleaning, feature engineering, categorical encoding, and model evaluation using Python, Pandas, Scikit-learn, and XGBoost.
- Developed a FastAPI backend and responsive HTML/CSS/JavaScript frontend for real-time price prediction, integrating the trained ML model into a deployable web application.

Deepfake Audio Detection

May 2026

- Developed and deployed a machine learning system to classify AI-generated and authentic speech using MFCC, Zero-Crossing Rate, Spectral Centroid, Chroma, RMS Energy, and Spectral Rolloff features.
- Built Flask REST APIs for audio upload, feature extraction, prediction, confidence scoring, and automated report generation.

MedTriage AI – Multimodal Symptom Triage Assistant

March 2026

- Built a multimodal AI application for symptom analysis and preliminary triage by integrating speech, text, and image-based inputs with AI-powered response generation.
- Developed RESTful backend APIs and integrated AI workflows for symptom processing, recommendation generation, and report delivery.

D-Lock – Blockchain-Based Secure File Storage System

June 2025

- Developed a decentralized file storage platform using AES-256 encryption and integrated Aptos Blockchain for tamper-proof file verification and integrity validation.

ACHIEVEMENTS & LEADERSHIP

- First Runner-Up at **Gemma for Bharat Hackathon**, Awarded 2nd place for **MandiMitra**, an AI-powered crop market advisor built using Google's Gemma model
- Finalist, **Comsys Hackathon 6** — Advanced to the final round in a competitive national-level hackathon.
- Hackathon Participant — Participated in CosmoHack, Algorand BuildStation Kolkata Edition, and other technical events.
- Associate Member, **Google Developers Group (GDG)** — Engaged in developer communities, technical workshops, and industry-focused events.
