SUMMARY

Computer Science student with a strong foundation in Data Structures and Algorithms, specializing in backend development and machine learning. Proficient in Python and C++, with hands-on experience building secure, scalable applications using Flask and blockchain-based technologies. Passionate about engineering intelligent, real-world systems, from clean RESTful backends to applied ML and AI models.

EDUCATION

Aug 2024 – May 2028

Narula Institute of Technology, Agarpara | West Bengal

Bachelor of Technology in Computer Science and Engineering

TECHNICAL SKILLS

Languages: C, C++, Python

Frontend: ReactJS, JavaScript, HTML, CSS

Backend: Flask, FastAPI, RESTful APIs

Databases: MySQL, Redis

Tools/Cloud: Git, GitHub, VS Code, Docker

Core Competencies: Data Structures & Algorithms, OOP, Database Design, Machine Learning Fundamentals, Blockchain Integration

KEY PROJECTS

Deepfake Audio Detection

May2026

- Trained and deployed a machine learning model for detecting AI-generated voice samples from audio recordings.
- Performed feature engineering on speech signals using MFCC, ZCR, Spectral Centroid, Chroma, RMS Energy, and Spectral Rolloff features.
- Designed Flask-based APIs for audio upload, feature extraction, prediction, and report generation with confidence scoring.

D-Lock: Blockchain-Based Secure File Storage System

December 2025

- Designed and developed a secure file storage platform using AES-256 encryption to ensure data confidentiality.
- Integrated Aptos Blockchain to enable tamper-proof file verification and integrity checks.
- Implemented a decentralized trust model to eliminate reliance on centralized servers.
- Ensured secure file upload, retrieval, and validation through smart contract interactions.

MedTriage AI – Multimodal Symptom Triage Assistant

March2026

- Built an AI-powered medical triage assistant capable of analyzing symptoms and generating preliminary recommendations.
- Integrated frontend and backend services for a multimodal AI-based symptom triage platform.
- Developed RESTful APIs for symptom submission, response generation, and report delivery.
- Implemented API communication workflows for symptom analysis and recommendation delivery.

ACHIEVEMENTS & LEADERSHIP

- Open Source Contributor — Selected for **GSSoC 2026** and **Nexus Spring of Code 2026**.
- Finalist, **Comsys Hackathon 6** — Advanced to the final round in a competitive national-level hackathon.
- Hackathon Participant — Participated in CosmoHack, Algorand BuildStation Kolkata Edition, and other technical events.
- Associate Member, **Google Developers Group (GDG)** — Engaged in developer communities, technical workshops, and industry-focused events.
